DETAILED ACTION

Status of Application

Claims 1, 3-5, and 8-9 are pending and presented for examination on the merits, as claims 2 and 6-7 have been withdrawn as per applicant's response to the requirement for restriction (see section below).

Election/Restrictions

1. Claims 2 and 6-7 are withdrawn from further consideration pursuant to 37 CFR
1.142(b) as being drawn to a nonelected Groups II and III, there being no allowable
generic or linking claim. Election was made without traverse in the reply filed on
October 15th, 2009. Furthermore, applicant was correct in asserting claim 5 be included
with the Group I invention, and thus, it will be treated on the merits in this office action.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should

Application/Control Number: 10/556,934

Art Unit: 1793

describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. The abstract of the disclosure is objected to because of its excess in length (approx. 180 words). Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not

Application/Control Number: 10/556,934

Art Unit: 1793

commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 1, 3-5, and 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent Pub. No. 2000-212892 by Kurata et al, in view of Japanese Patent Pub. No. 10-310996 by Nishijima et al.

With respect to claims 1 and 3-4, Kurata is drawn to a coated printing paper (title). Specifically, such a coating composition is composed of a spindle-shaped precipitated calcium carbonate having average particle diameters of 3.0 to 5.0 microns in a secondary particle shape (abstract, claim 1).

However, Kurata is silent with regards towards the primary particles having a long diameter of 0.5 to 3.0 microns, a short diameter of 0.1 to 1.0 micron, and thus, an aspect ratio of 3 or more.

Nishijima is drawn to the production of coated paper for offset printing (title). Specifically, Nishijima discloses a coating composition of needle-like or prism-like precipitated calcium carbonate having a long diameter of 3.0 to 5.0 microns and a short diameter of 0.2 to 0.5 microns (abstract, claim 1), and thus, an aspect ratio of 6 or more. MPEP 2144.05 [R-5] states that, "In the case where the claimed ranges 'overlap or lie inside ranges disclosed by the prior art' a *prima facie* case of obviousness exists."

At the time of invention it would have been obvious to a person of ordinary skill in the art to produce the product of Kurata including primary particles with specific long and short diameters, in view of the teaching of Nishijima. The suggestion or motivation

Application/Control Number: 10/556,934

Art Unit: 1793

for doing so would have been to improve the operability and decrease the cost of printing with the use of such a primer coating solution composition (**Nishijima, abstract**).

With respect to claim limitations drawn to BET surface area and pore volume,

MPEP 2112.01 [R-3] states that, "Where the claimed and prior art products are identical
or substantially identical in structure or composition, or are produced by identical or
substantially identical processes, a *prima facie* case of either anticipation or <u>obviousness</u>
has been established." As such a precipitated calcium carbonate has been rendered
obvious, such properties would necessarily follow by the combination of Kurata and
Nishijima.

With respect to claims 5 and 8-9, as both Kurata and Nishijima are drawn to the production of coated paper with a coating composition based on precipitated calcium carbonate (**Kurata**, **abstract**, **claim 1**, **and Nishijima**, **abstract**, **claim 1**), it follows that the precipitated calcium carbonate can be considered a filler for the loading paper.

Conclusion

- 9. Claims 1, 3-5, and 8-9 are rejected.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph V. Micali whose telephone number is (571) 270-5906. The examiner can normally be reached on Monday through Friday, 7:30am to 5pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry A. Lorengo can be reached on (571) 272-1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
